

Product Description:

The Proton 1250A™ completely destroys CD and DVD optical media with hi-pressure indentation that destroys the optical plane and renders it unrecoverable. An automatic feeder holds 200 CD, DVD or Blu-Ray disks and processes 1000 per hour, with the label in either direction. The unit has a delay circuit that allows the disintegrator to run 5 minutes after the front panel power switch is turned "off", thereby insuring that the disintegrator clears all debris prior to shutdown. The Proton 1250 series is on the NSA Evaluated Products List and meets all NIST and DoD guidelines for electronic data disposal

Features

Benefits

<ul style="list-style-type: none"> § Proton 1250A complies with DoD requirements for destroying classified information on optical media § Patented "micro-indentation" technology totally destroys all readable data § Automatic On/Off operation with delay circuit § Table top or floor operation § Manufactured in the USA 	<ul style="list-style-type: none"> § Destruction of confidential, sensitive and classified data is in accordance with recognized standards § Confidence that confidential data on optical media is rendered unusable even if not disposed off properly § Minimal training and simplicity of use § Fits easily into existing operations § Source control assurance and quality provide extended useful life
